ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2352 strategy shows a 41.35% gain on LPG, yet the Sharpe ratio of 1.13 and 21.82% drawdown reveal significant volatility. With only three trades, the statistical confidence is minimal, making the 66.7% win rate unreliable for live deployment. The strategy likely failed to capture broader trend shifts due to insufficient sample data and overfitting to a narrow range. A prudent next step is expanding the backtest window to include different market regimes before considering live execution.
