ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v51 backtest on AMD shows an impressive 87.88% ROI driven by a single winning trade, yet the 26.05% drawdown and 50% win rate indicate extreme fragility in a two-trade sample. Statistical significance is nonexistent here; the high Sharpe ratio of 1.61 is an artifact of insufficient data rather than robust risk-adjusted performance. The strategy likely lacks proper position sizing or stop-loss logic to prevent catastrophic losses during the one adverse move. Immediate next step is to retest the strategy with a larger historical dataset or adjust parameters to enforce tighter stop losses and verify if the win rate stabilizes before live deployment.
