ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOG_v475 strategy on META produced a -17.5% loss with a zero win rate across only three trades, rendering the negative Sharpe of -0.85 statistically insignificant. The catastrophic 33.28% drawdown suggests a critical failure in entry logic or stop-loss placement rather than a systemic market downturn. Given the extremely low trade count, any performance metric is highly unstable and lacks the sample size required for reliable risk assessment. Immediate parameter optimization is necessary to validate whether the strategy can generate consistent signals before further capital allocation.
