ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v447 strategy on RDN failed completely with zero winning trades, eroding capital to a 14.78% drawdown. Statistical significance is impossible with only three trades, rendering the -5.59% return and -0.31 Sharpe ratio meaningless. The total loss of 5.59% suggests the entry logic lacks robustness or suffers from severe overfitting on this specific dataset. I recommend running a walk-forward analysis with expanded parameter ranges to test stability before re-deployment. This result highlights the critical risk of optimizing on insufficient sample sizes in volatile markets.
