-6.61%	-0.47	33.3%	-17.84%

EQUITY CURVE202 sessions · starting at \$10000.00

ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v527 strategy failed on AMZN, delivering a -6.61% return with a negative Sharpe ratio of -0.47 due to a severe 17.84% drawdown across only three trades. Such a tiny sample size renders the statistical results meaningless, as a single loss could distort the entire equity curve. The low win rate of 33.3% indicates the entry logic lacks robustness in the current market environment. Immediate next steps involve increasing the historical test period to validate whether the strategy is broken or merely unlucky.
