ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v359 strategy yielded a +20.07% return on Microsoft, but the statistical validity is critically weak due to only two trades executed. A 50% win rate and 1.06 Sharpe ratio cannot be trusted without a larger sample size to confirm consistency beyond random variance. The maximum drawdown of 14.24% indicates significant volatility risk that was not fully mitigated by the current signal logic. We must run a robustness check with randomized walk-forward analysis to validate edge before scaling capital. This analysis is educational and does not constitute investment advice.
