ANALYST NOTE

Hera local LLM

The EVO_EVOWEBIDEA_v301 backtest on SM shows a +46.62% return with a perfect 100% win rate, yet the statistical confidence is negligible due to only two trades. A 32.83% maximum drawdown reveals extreme volatility exposure that a 1.32 Sharpe ratio cannot fully mitigate in such a small sample size. Relying on this signal is dangerous because the outcome likely reflects luck rather than a robust edge in the SM asset. We must expand the sample size before deploying capital to validate whether the strategy holds under diverse market conditions.
