ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v315 strategy generated a +6.75% ROI on GOOGL, yet the 0.54 Sharpe ratio and 33.3% win rate indicate a statistically insignificant sample given only three executed trades. While the strategy preserved capital with a controlled 15.79% max drawdown, the low trade frequency prevents reliable assessment of its true edge or consistency. We must expand the evaluation window to accumulate sufficient data points before drawing definitive conclusions on its viability. The next step is to run a fresh backtest over a longer historical period to validate performance stability.
