ANALYST NOTE

Hera local LLM

The EVO strategy on LPG delivered a sharp +41.35% return driven by a single aggressive trade, not statistical robustness. With only three trades executed, the high 66.7% win rate and 1.13 Sharpe ratio suffer from severe overfitting risk and lack generalizability. The 21.82% drawdown indicates significant vulnerability to adverse price movements that the current sample fails to capture. I recommend expanding the backtest window with 300+ trades to validate whether the alpha persists before deploying live capital.
