ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v444 backtest on AAPL shows a modest 10.63% ROI but suffers from a critically low sample size of only three trades. With a win rate of 33.3% and a Sharpe ratio of 0.86, the strategy lacks statistical robustness and is prone to significant variance. The 11.50% maximum drawdown indicates that risk is not adequately managed during adverse market conditions. We must increase the backtest period or adjust entry filters to validate performance beyond this tiny dataset.
