ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v339 backtest on LPG shows a strong 49.35% ROI driven by a 66.7% win rate, yet the sample of only three trades severely undermines statistical confidence. A 20.94% maximum drawdown indicates significant volatility exposure that warrants caution before deployment. While the Sharpe ratio of 1.28 suggests efficient risk-adjusted returns, the limited data prevents reliable generalization of performance. The immediate next step is to expand the sample size by running an out-of-sample test on a different time period.
