ANALYST NOTE

Hera local LLM

The EVO_EVOGG1RSIS_v428 strategy generated a 49.35% return on LPG with a 1.28 Sharpe ratio, though a 20.94% maximum drawdown suggests significant risk exposure. The 66.7% win rate across only three trades indicates that the statistical confidence is too low to validate the strategy's robustness. Such a small sample size likely results in overfitting, where the model exploits noise rather than capturing genuine market inefficiencies. We must run a longer backtest with expanded parameters to verify if these results persist outside this narrow timeframe.
