ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v252 strategy on LPG delivered a 46.76% ROI with a 1.23 Sharpe ratio, driven by a 66.7% win rate across only three trades. However, the statistical significance is critically low due to the minimal sample size, making the 20.33% maximum drawdown highly volatile and unrepresentative of live performance. While the positive equity curve suggests potential alpha, the lack of trade frequency prevents a reliable assessment of consistency or risk resilience under changing market conditions. A necessary next step is to execute a rolling window backtest with a minimum of 100 trades to validate whether the observed edge persists or was merely a lucky outlier.
