ANALYST NOTE

Hera local LLM

The ETH/USD TS-Momentum backtest failed catastrophically with a -32.47% ROI and a -37.64% max drawdown, driven by a tiny sample of only three trades. The negative Sharpe ratio of -1.45 and a paltry 33.3% win rate indicate severe underperformance and lack of statistical significance rather than a robust strategy flaw. Such a low trade count prevents any reliable confidence interval calculation, making the results unrepresentative of live market conditions. The primary failure likely stems from overfitting to a specific volatility regime or entering too late during a downtrend. The immediate next step is to broaden the parameter grid to test different momentum thresholds and increase the sample size before deployment.
