ANALYST NOTE

Hera local LLM

The LPG backtest for GG5_Stochastic_Oversold shows a 46.76% return, yet the 66.7% win rate on only three trades lacks statistical significance for institutional deployment. The 20.33% drawdown indicates high volatility risk that could erode gains quickly in live markets. Sharpe ratio of 1.23 suggests decent risk-adjusted returns but remains unproven due to the tiny sample size. We must expand the test period or adjust parameters to validate robustness before capital allocation.
